

Healthcare

Healthy lives to all people

In advanced nations, health consciousness and awareness of preventive medicine are increasing due to social security cost issues and concerns about the sustainability of healthcare systems. The demand for pharmaceuticals is also increasing in emerging nations as well due to improvement in living standards. The cellulose derivative supplied by the Nippon Soda Group is widely used domestically and abroad as a binder for pharmaceutical tablets that makes medicines easier to take, and it is also being developed for use in food processing for supplements and other food products. In the future, we will continue to develop support services for high-performance products and formulation technology and actively research and develop products that contribute to improving people's health and life.

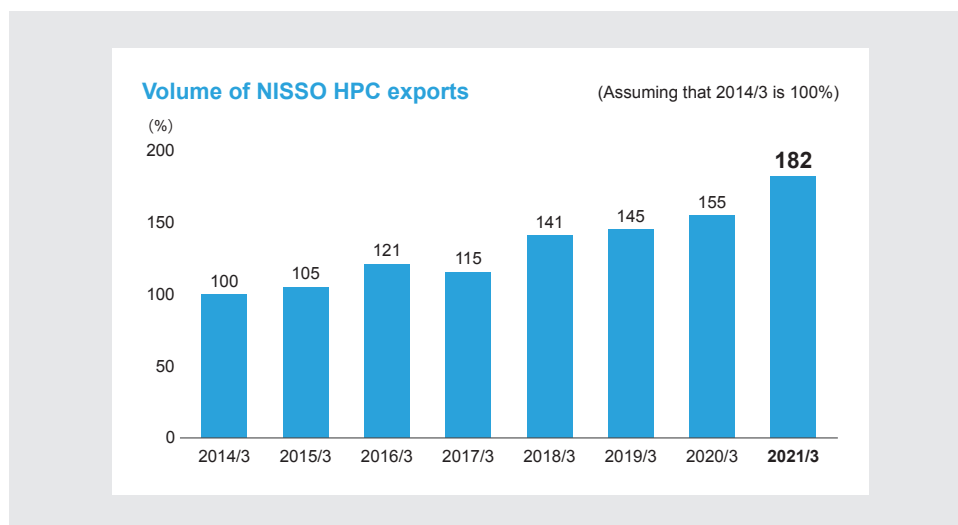

Materiality

Contributing to providing health to all people through pharmaceuticals

- Support services for high-performance products and formulation technologies

KPI

1 Contributions

At present, NISSO HPC is exported to more than 60 countries.
