

Applying the functionality of chemicals to IT devices

Smart devices are becoming more popular around the world as the progress in information and communication technologies accelerates. This market is expected to grow significantly in the future.

The Nippon Soda Group uses its precision polymerization technology and organic synthesis technology to provide high-performance polymers for use in materials for next-generation 5G communications devices and photoresists for semiconductors. In order to meet the needs of future technological innovations, we are focusing on developing new materials for use in a wide range of fields.

Materiality

Contributing to the development of information equipment that is friendly to the environment and people by supplying high-performance materials

- Supply of high-performance materials that are friendly to the environment and people

KPI

- 1 Contributed shipment value
